

CURRENT GROWTH: AUTODRIVE SALISBURY PLAIN

Prepared by Stalin for Jitty George · 12 September 2026 · Numbers read from Google Business Profile, Meta Business Suite, Instagram and Google Analytics on 11–12 September

In the first week of July I put the case to Jitty that AutoDrive needed to be posting video regularly, and set the direction for it: short reels, one topic each, every week, all pointing back to the phone and the website. This document shows what has changed since then on the places customers find the business: Google, Facebook, Instagram and the website. The big reel of 8 September is shown separately from everything else, so the everyday result and the exceptional one can each be seen for what they are. Where a number is small or only partly proven, I say so.

3.5*	10*	+55 → +811	125K
calls from the Google profile, monthly average, Apr–Jun vs Jul–Aug	average reach of an ordinary post, with the big reel taken out	new Instagram followers, before vs after the change in direction	views on one reel in three days, 643 new followers from it

1. GOOGLE BUSINESS PROFILE (THE LISTING PEOPLE SEE WHEN THEY SEARCH)

This is the profile on Google Search and Maps. Its Performance tab shows what people did after finding it. Red figures are the months after the change in direction; September is shown separately because it is 11 days old.

PER MONTH	APR	MAY	JUN	JUL	AUG	BEFORE AVG	AFTER AVG	SEP 1–11
Calls from the profile	5	5	3	16	14	4.3	15	1
Website clicks from the profile	12	20	13	37	24	15	30.5	6
All profile interactions	63	87	84	91	121	78	106	13
Direction requests	46	62	68	38	83	59	61	6

- **Calls tripled.** People who find the profile now ring far more often. Direction requests stayed flat, which makes sense: regulars already knew where the shop was. The change is in contact, not navigation.
- **1,115 people saw the profile in Google search results in August** (Google's own monthly figure). Separately, the Maps listing shows 3,437 views on its counter, which is a running total since the listing was created, not a monthly number.
- Ten posts have been published on the Google profile itself since 17 July (Google lets a business post updates on its listing, the way it would on Facebook). There were none before July. The phone number is now the same everywhere: 0432 520 230.

- September to date is quiet on Google (11 days, and the big reel's audience went to Instagram and Facebook, not to Google). Google responds to steady posting over months, not to one video.

2. FACEBOOK (THE AUTODRIVE PAGE)

Business Suite compares 1 January to 5 July (186 days, before) with 6 July to 10 September (67 days, after). The "after" column includes the big reel; section 4 shows the same period with it taken out.

FACEBOOK PAGE	BEFORE (186 DAYS)	AFTER (67 DAYS)	WHAT IT MEANS
People reached	2,869	58,588	20 times the reach in a third of the time
New followers	+8	+271	page now at 459 followers
Posts per week	3.6	6.5	and most of them are now reels, not photos
Best post of the year	450 reach (photo)	46,899 viewers (reel)	video is the format that travels

3. INSTAGRAM (@AUTODRIVE_SALISBURYPLAIN)

INSTAGRAM ACCOUNT	BEFORE (186 DAYS)	AFTER (67 DAYS)	WHAT IT MEANS
People reached	3,084	92,452	30 times the reach
New followers	+55	+811	account now at 1,162 followers
Average reach per post	44	1,211	430 with the big reel left out: still 10x on a normal post

4. SEPTEMBER AND THE BIG REEL, SHOWN ON THEIR OWN

On Tuesday 8 September the reel "Are you looking for a family car?" took off. To keep the everyday result honest, here is the after-period twice: once as it happened, and once with that single reel taken out.

6 JUL – 10 SEP	BEFORE (JAN–5 JUL)	AFTER, AS IT HAPPENED	AFTER, WITHOUT THE 8 SEP REEL	READ
Facebook people reached	2,869	58,588	≈ 11,700	still 4× the previous six months, in a third of the time
Instagram people reached	3,084	92,452	≈ 35,700	still 11× the previous six months
Facebook new followers	+8	+271	+25	3× the previous six months
Instagram new followers	+55	+811	+168	3× the previous six months
Average reach per post	44	1,211	430	10× on an ordinary post: this is the method, not luck
Posts in September (to the 10th)	—	8 (3 reels)	7 (2 reels)	the slowest fortnight since July; the schedule slipped

The reel itself: 125,532 views in three days (56,444 Facebook, 69,088 Instagram). 780 likes, 77 comments, 520 shares, 231 saves. 643 people followed the account from it and 1,900 visited the profile. Average watch time 28 seconds. 98.7% of the watch time came from Instagram and Facebook recommending it to people who do not follow us: the platforms chose to show AutoDrive to strangers because the video held their attention. On the website it produced a two-day spike (25 and 31 visitors on 8 and 9 September, the second-busiest day since tracking began) that mostly landed on the home page. It built awareness and followers; the enquiries it will bring are the slow kind, from people who now recognise the name.

What one reel like this does over time. The 643 people it added are 55% of the whole Instagram audience; every reel posted from now on lands in front of 2.4 times more people than in August, before anyone shares it. That is how consistent exposure compounds: the ordinary reel got 10× better because the account was posting, and the audience it reaches got 2.4× bigger because one of those reels travelled. It took 37 reels in ten weeks to produce one that did this. Post one a month and the odds of another are small; post weekly and they are reasonable. A big reel cannot be planned, but the conditions for one can be kept up.

5. IS IT REACHING ADELAIDE? (THE HONEST READ)

- **Adelaide is the number one city in the audience on both platforms:** 16.6% of Facebook followers and 20.3% of Instagram followers, ahead of Melbourne, Sydney and the overseas Malayali community. Australia is 42% of the Facebook audience and 56% of the Instagram audience.
- **The everyday reels reach South Australia first.** The 18 August BMW reel had South Australia as its top region. The 3 September van reel had South Australia in its top five. These are the videos that bring local people to the page.
- **The big reel went national and overseas.** About 20% of its Facebook viewers were in Australia and the rest were in the UK, India, Canada and the Gulf. Many of its comments were in Malayalam and not local enquiries, and I am not counting them as leads.
- **What did come through:** a customer called the workshop after seeing the videos, the profile calls tripled on Google, and word of mouth now lands on a page that looks busy and trusted. Someone who is referred to AutoDrive and looks it up sees a business that is active every week.
- The audience is about 90% men aged 25 to 44, which is the buyer for used family cars and servicing.

The website tells the same story. Tracking only began on 14 July, so there is no "before" for the site, but since then:

WEBSITE, 14 JULY TO 12 SEPTEMBER	NUMBER	WHAT IT MEANS
People who visited	482	639 visits; 77% on a phone
Visitors from Adelaide	139	the largest city by far; South Australia is 29% of all visitors
Google visitors who are in Adelaide	64-87%	Google search 64%, Google Business Profile 87%: Google sends local people
People who tapped WhatsApp	77	1 in 6 visitors; 272 taps in total
WhatsApp tappers in Adelaide	36	almost half of everyone who tapped; 124 taps
People who tapped the phone number	17	plus 19 who picked a booking date and 9 who sent vehicle details
Most-read page after the home page	Used cars	146 views and the longest time on page, 1 min 31 s

Instagram sends the most visitors (37% of visits) but only 15% of them are in Adelaide; Google sends fewer visitors and most of them are local. Both matter: Instagram builds the audience, Google converts the neighbourhood.

6. WHY IT HAS TO BE CONSISTENT (WHAT THE NUMBERS SAY ABOUT THE METHOD)

The big reel is the exception. The proof of the method is the ordinary post: an average post now reaches 430 people instead of 44, ten times more, because the accounts post video every week and the platforms reward that. Reach, followers and Google calls all moved together after July, and none of them moved in the six months before, when posting was occasional and mostly photos.

- Weekly reels are what local people see. The big ones grow the audience those weekly reels land on. Both stop the moment posting stops, and the platforms forget an account within weeks. September's slower fortnight is what that looks like starting.
- There is already filmed footage waiting to be cut, so the next two weeks of content do not depend on new shoots.
- My proposal for keeping this going, with the scope and the monthly fee, is in the separate proposal document. This document is only the evidence.

SOURCES AND CAVEATS

Google Business Profile → Performance, April to 11 September 2026, read 12 September; September is 11 days and not a full month. Meta Business Suite → Insights (Results, Content, Audience) and per-post insights, read 11 September; Meta's data ends 10 September, and its reach figures are daily sums, so a person who saw posts on several days is counted once per day. The "without the reel" column subtracts the reel's own per-platform reach and its follows from the after-period totals, so it is an estimate, not a Meta report. Google Analytics for the website, 14 July to 12 September, read 12 September; tracking only started on 14 July, so the website has no "before" period. All figures are as reported by the platforms and can be checked live in the AutoDrive accounts.
