

# CURRENT GROWTH: AUTODRIVE SALISBURY PLAIN

Prepared by Stalin for Jitty George · 12 September 2026 · Numbers read from Google Business Profile, Meta Business Suite, Instagram and Google Analytics on 11–12 September

- In the first week of July I put the case to Jitty: post video regularly.
- The direction: short reels, one topic each, every week, all pointing back to the phone and the website.
- This document shows what changed since then on Google, Facebook, Instagram and the website.
- The big reel of 8 September is shown on its own, so the everyday result stays honest.

|                                                                                   |                                                                              |                                                                                       |                                                                           |
|-----------------------------------------------------------------------------------|------------------------------------------------------------------------------|---------------------------------------------------------------------------------------|---------------------------------------------------------------------------|
| <b>3.5*</b><br>calls from the Google profile, monthly average, Apr–Jun vs Jul–Aug | <b>10*</b><br>average reach of an ordinary post, with the big reel taken out | <b>+55 → +811</b><br>new Instagram followers, before vs after the change in direction | <b>125K</b><br>views on one reel in three days, 643 new followers from it |
|-----------------------------------------------------------------------------------|------------------------------------------------------------------------------|---------------------------------------------------------------------------------------|---------------------------------------------------------------------------|

## 1. GOOGLE BUSINESS PROFILE (THE LISTING PEOPLE SEE WHEN THEY SEARCH)

- Red figures are the months after the change in direction.
- September is 11 days old, so it sits in its own column.

| PER MONTH                       | APR | MAY | JUN | JUL | AUG   | BEFORE AVG | AFTER AVG | SEP 1–11 |
|---------------------------------|-----|-----|-----|-----|-------|------------|-----------|----------|
| People who viewed the profile   | 265 | 511 | 592 | 825 | 1,115 | 456        | 970       | 129      |
| Calls from the profile          | 5   | 5   | 3   | 16  | 14    | 4.3        | 15        | 1        |
| Website clicks from the profile | 12  | 20  | 13  | 37  | 24    | 15         | 30.5      | 6        |
| All profile interactions        | 63  | 87  | 84  | 91  | 121   | 78         | 106       | 13       |
| Direction requests              | 46  | 62  | 68  | 38  | 83    | 59         | 61        | 6        |

- **Profile views doubled.** 456 a month before, 970 a month after. 2.1×.
- **Calls tripled.** 4.3 a month before, 15 a month after. 3.5×.
- Calls grew faster than views. More of the people who find the profile now ring. Conversion improved, not just exposure.
- Website clicks doubled.
- Direction requests stayed flat. Regulars already knew where the shop was. The change is in contact, not navigation.
- **1,115 people viewed the profile in August.** Search and Maps together. The highest month on record.

- 3,437 profile views across the six months, April to 10 September.
- Ten updates have been posted on the Google profile itself since 17 July. None before July.
- The phone number is now the same everywhere: 0432 520 230.
- September is quiet on Google so far. The big reel's audience went to Instagram and Facebook. Google responds to steady posting over months, not to one video.

## 2. FACEBOOK (THE AUTODRIVE PAGE)

- Before = 1 January to 5 July (186 days). After = 6 July to 10 September (67 days).
- The "after" column includes the big reel. Section 4 shows the same period without it.

| FACEBOOK PAGE         | BEFORE (186 DAYS) | AFTER (67 DAYS)              | WHAT IT MEANS                        |
|-----------------------|-------------------|------------------------------|--------------------------------------|
| People reached        | 2,869             | <b>58,588</b>                | 20× the reach in a third of the time |
| New followers         | +8                | <b>+271</b>                  | page now at 459 followers            |
| Posts per week        | 3.6               | <b>6.5</b>                   | most of them now reels, not photos   |
| Best post of the year | 450 reach (photo) | <b>46,899 viewers (reel)</b> | video is the format that travels     |

### Local reach on Facebook

- Adelaide is the number one city among the page's followers: 16.6%. Australia is 42.5% of the audience.
- Facebook shows where each reel's viewers are, by region. On the ordinary reels, South Australia comes first or near it.
- 18 August BMW reel: South Australia was the top region. 32 of about 157 viewers, one in five.
- 3 September van reel: South Australia in the top five. 54 of about 574 viewers.
- The big reel is the exception: about 20% of its Facebook viewers were in Australia, and South Australia sat outside its top ten regions.
- Estimate of local reach since July, without the big reel: about 2,000 people in Adelaide. That applies the follower split (one in six) to the 11,700 reached. It is an estimate, not a Meta figure.

## 3. INSTAGRAM (@AUTODRIVE\_SALISBURYPLAIN)

| INSTAGRAM ACCOUNT | BEFORE (186 DAYS) | AFTER (67 DAYS) | WHAT IT MEANS |
|-------------------|-------------------|-----------------|---------------|
| People reached    | 3,084             | <b>92,452</b>   | 30× the reach |

| INSTAGRAM ACCOUNT      | BEFORE (186 DAYS) | AFTER (67 DAYS) | WHAT IT MEANS                             |
|------------------------|-------------------|-----------------|-------------------------------------------|
| New followers          | +55               | <b>+811</b>     | account now at 1,162 followers            |
| Average reach per post | 44                | <b>1,211</b>    | 430 with the big reel left out: still 10× |

### Local reach on Instagram

- Adelaide is the number one city among followers: 20.3%. Australia is 56.4% of the audience.
- Instagram does not show cities per reel, only countries. On the big reel, 51.8% of viewers were in Australia, then the UK 11.2%, India 8.6%, New Zealand 8.1%, Canada 5.1%.
- Estimate of local reach since July, without the big reel: about 7,000 people in Adelaide. That applies the follower split (one in five) to the 35,700 reached. It is an estimate, not a Meta figure.
- Instagram sends the most visitors to the website, and 15% of those visits are from Adelaide. Google's are 64% to 87% Adelaide.

## 4. SEPTEMBER AND THE BIG REEL, SHOWN ON THEIR OWN

- On Tuesday 8 September the reel "Are you looking for a family car?" took off.
- Below, the after-period twice: as it happened, and with that one reel taken out.

| 6 JUL – 10 SEP                   | BEFORE<br>(JAN–5 JUL) | AFTER, AS IT<br>HAPPENED | AFTER, WITHOUT<br>THE 8 SEP REEL | READ                                                     |
|----------------------------------|-----------------------|--------------------------|----------------------------------|----------------------------------------------------------|
| Facebook people reached          | 2,869                 | <b>58,588</b>            | ≈ 11,700                         | still 4× the previous six months, in a third of the time |
| Instagram people reached         | 3,084                 | <b>92,452</b>            | ≈ 35,700                         | still 11×                                                |
| Facebook new followers           | +8                    | <b>+271</b>              | +25                              | still 3×                                                 |
| Instagram new followers          | +55                   | <b>+811</b>              | +168                             | still 3×                                                 |
| Average reach per post           | 44                    | <b>1,211</b>             | 430                              | 10× on an ordinary post. This is the method, not luck    |
| Posts in September (to the 10th) | —                     | 8 (3 reels)              | 7 (2 reels)                      | the slowest fortnight since July                         |

- **The reel itself:** 125,532 views in three days. 56,444 on Facebook, 69,088 on Instagram.
- 780 likes. 77 comments. 520 shares. 231 saves.
- 643 people followed the account from it. 1,900 visited the profile.
- Average watch time 28 seconds.
- 98.7% of the watch time came from Instagram and Facebook recommending it to strangers. The platforms chose to show it because people kept watching.
- On the website: a two-day spike, 25 and 31 visitors on 8 and 9 September, mostly on the home page.
- It built awareness and followers. The enquiries it brings will be the slow kind, from people who now recognise the name.

### What one reel like this does over time

- The 643 people it added are 55% of the whole Instagram audience.
- Every reel from now on lands in front of 2.4× more people than in August, before anyone shares it.

- The ordinary reel got 10× better because the account was posting.
- The audience got 2.4× bigger because one of those reels travelled.
- It took 37 reels in ten weeks to produce one that did this.
- Post once a month and the odds of another are small. Post weekly and they are reasonable.
- A big reel cannot be planned. The conditions for one can be kept up.

---

## 5. IS IT REACHING ADELAIDE? (THE HONEST READ)

- **Adelaide is the number one city in the audience on both platforms.** 16.6% of Facebook followers, 20.3% of Instagram followers.
- Next come Melbourne, Sydney and the overseas Malayali community.
- Australia is 42% of the Facebook audience and 56% of the Instagram audience.
- **The everyday reels reach South Australia first.** The 18 August BMW reel had SA as its top region. The 3 September van reel had SA in its top five.
- **The big reel went national and overseas.** On Instagram 52% of its viewers were in Australia. On Facebook about 20%. The rest were in the UK, India, Canada and the Gulf.
- Meta does not give Adelaide views per post. The closest measures are the follower split (Adelaide number one on both platforms) and the South Australia region on ordinary Facebook reels.
- Many of its comments were in Malayalam and not local enquiries. I am not counting them as leads.

**The website tells the same story.** Tracking began on 14 July, so there is no "before" for the site.

| WEBSITE, 14 JULY TO 12 SEPTEMBER    | NUMBER        | WHAT IT MEANS                                                             |
|-------------------------------------|---------------|---------------------------------------------------------------------------|
| People who visited                  | 482           | 639 visits. 77% on a phone                                                |
| Visitors from Adelaide              | <b>139</b>    | the largest city by far. South Australia is 29% of all visitors           |
| Google visitors who are in Adelaide | <b>64–87%</b> | Google search 64%, Google Business Profile 87%. Google sends local people |
| People who tapped WhatsApp          | <b>77</b>     | 1 in 6 visitors. 272 taps in total                                        |
| WhatsApp tappers in Adelaide        | <b>36</b>     | almost half of everyone who tapped. 124 taps                              |

- Instagram sends the most visitors, 37% of visits. Only 15% of them are in Adelaide.
- Google sends fewer visitors. Most of them are local.
- Both matter. Instagram builds the audience. Google converts the neighbourhood.

---

## 6. WHY IT HAS TO BE CONSISTENT (WHAT THE NUMBERS SAY ABOUT THE METHOD)

- The big reel is the exception. The proof of the method is the ordinary post.
- An average post now reaches 430 people instead of 44. Ten times more.
- That happened because the accounts post video every week, and the platforms reward it.
- Reach, followers and Google calls all moved together after July.
- None of them moved in the six months before, when posting was occasional and mostly photos.
- Weekly reels are what local people see. The big ones grow the audience those weekly reels land on.
- Both stop the moment posting stops. The platforms forget an account within weeks.
- September's slower fortnight is what that looks like starting.

---

## SOURCES AND CAVEATS

- Google Business Profile → Performance, April to 11 September 2026, read 12 September. September is 11 days, not a full month.
- Meta Business Suite → Insights (Results, Content, Audience) and per-post insights, read 11 September. Meta's data ends 10 September.
- Meta reach figures are daily sums. A person who saw posts on several days is counted once per day.
- The "without the reel" column subtracts the reel's own reach and follows from the after-period totals. It is an estimate, not a Meta report.
- Google Analytics for the website, 14 July to 12 September, read 12 September. Tracking only started on 14 July.
- All figures are as reported by the platforms and can be checked live in the AutoDrive accounts.
