

WHY REELS WORK

The idea in one line: every reel names ONE problem a driver is having right now, shows you fixing it, and sends them to the link in bio — where the website turns them into a WhatsApp booking with their car's details already filled in. This is the case for doing it, in your own numbers.

WHY THIS WORKS

YOUR OWN NUMBERS SAY VIDEO IS THE ENGINE

This isn't a guess — it's what your accounts are already doing:

#1

Instagram's bio link is the website's biggest traffic source — 37% of all visits since tracking began, ahead of Google and direct

54.8K

Instagram views in the last 90 days — 4 out of 5 from people who don't follow you yet

62%

of visitors arriving from Instagram engage with the site, vs 41% from everywhere else — they arrive already interested

5.0★

Google rating from 20 reviews — the trust is already there, the videos just have to point at it

The five biggest traffic days the website has ever had were all days a reel landed — Instagram led every one of them. The gap: your reels get watched, but they end with the viewer scrolling on. The fix is not more views — it's **ending every reel with the same door** and making that door lead somewhere that closes the job.

THE EVIDENCE

ONE VIDEO ALREADY PROVED IT

The “**Engine Warning Light ON**” reel — one phone shot of a real dashboard, the problem named in big text, then shown fixed — is the playbook working before the playbook existed. Over the last 90 days:

19K

views — about a third of everything the account got in 90 days, from ONE reel

+187

followers from that single reel — 8 in every 10 new followers the account gained

95

shares (plus 51 saves) — people sending it to a mate whose car has that exact light on

124

bio-link taps from this reel alone — 7 in every 10 website visits Instagram sent

The account itself **doubled to 469 followers in 60 days**, and **4 out of 5 views came from non-followers** — Instagram carries these videos to strangers who've never heard of AutoDrive. And the two ends of the funnel agree: Instagram counted 180 bio-link taps; the website's own analytics counted ~176 arrivals from that link. One of them described an ABS fault, booked on WhatsApp, and became a paying customer — the full path, proven once already. The playbook exists to make that happen on purpose, every week.

THE VISITORS

LOCAL TRAFFIC, BEHAVING LIKE CUSTOMERS

478 website visits since tracking began on 14 July. Big view counts on Instagram are one thing — what matters is who actually walks through the door, and that audience is local and acting like buyers:

#1

Adelaide is the top city — 96 visitors, nearly 4× any other real city; Melbourne next among genuine ones

156

WhatsApp taps from within Australia — plus 42 booking dates picked and 22 phone-number taps

63%

engagement from Google search visitors (87 visits) — people who look the workshop up stay and read

2m03s

average time on the used-cars page — the longest on the site; that's browsing stock, not bouncing

PAGE	VIEWS	AVG TIME	WHAT IT SAYS
Home	543	22s	The front door — most arrivals from the bio link land here
Used cars	120	2m03s	Deepest engagement on the site — people study the stock
Services	119	47s	Visitors compare the \$149/\$229/\$329 tiers
Contact	97	40s	1 in 5 visits reaches the booking page

And because every WhatsApp button on the site carries its own named message, the taps tell us exactly what people want: 7 named the **Honda Civic** specifically, and the service tiers split **Standard 7 / Basic 6 / Premium 3** — per-car and per-service interest, tracked without asking anyone a single question.

THE DOOR

WHAT HAPPENS WHEN THEY CLICK

The website was rebuilt for exactly these videos. When someone taps the bio link:

So the message you receive already reads like this: *“Hi Jitty, my car is having some issues and I would like to get it checked. My car is free on Monday 17 August. Car: Mitsubishi Pajero, Year: 2009, Odometer: 317,000 km. Issue: ABS light flashing while driving.”* — a quote-ready lead, not a “hey, how much?”
